

Refreshing Reports in Web Intelligence 4.1

1. Login to Web Intelligence Rich Client

Note: Make sure you are connected to the server by checking the Connection Status in the bottom right corner of the window.

2. Open the Document to refresh
3. Click the Refresh Data button (three locations- See below)

The screenshot displays the Web Intelligence Rich Client interface. The main window shows a report titled "Report 1" with a data table. The table has columns: Course Subject Code, Course Number, Section Number, Building Name, Section Room Number, and Section Enrollment. The data rows are as follows:

Course Subject Code	Course Number	Section Number	Building Name	Section Room Number	Section Enrollment
COMM	100	D			0
COMM	101	A	Wohlers Hall	236	23
COMM	101	B			0
COMM	101	C			0
COMM	101	D			0
COMM	101	E	Gregory Hall	123	26
COMM	101	F	Gregory Hall	123	25

Three red circles and arrows highlight the "Refresh Data" button in three locations: the top-left toolbar, the top-right toolbar, and the bottom-right status bar. A central box labeled "Refresh Data" has arrows pointing to these three locations. The status bar at the bottom right shows "4 hours ago" and "Connected".

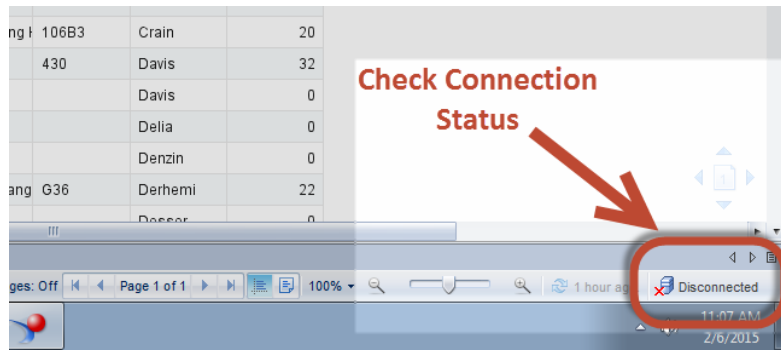

Unable to Refresh Document. Refresh Button is grayed out

This issue often happens when opening a document that has the **Remove Document Security** feature enabled. When the document was saved, the author checked the Remove Document Security box. If you open an unsecured Web Intelligence document when you are not logged into Web Intelligence and connected to the server, you will not be prompted to enter your Business Objects credentials, and therefore will be working in Offline or Disconnected mode.

Solution: Login to the Web Intelligence server before opening document

1. Check your Connection Status

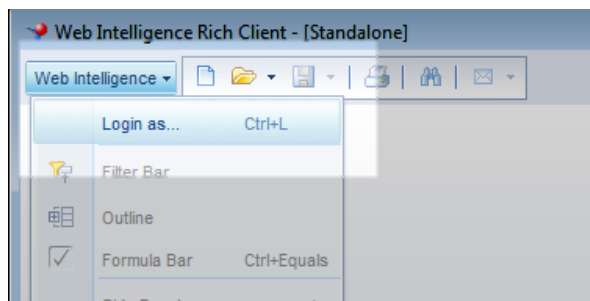

- a. Look in the bottom right-hand corner of your window. You will see either Connected or Disconnected.

- b. If disconnected, you will need to connect to the server before being able to refresh your document.

2. Connecting to the Server

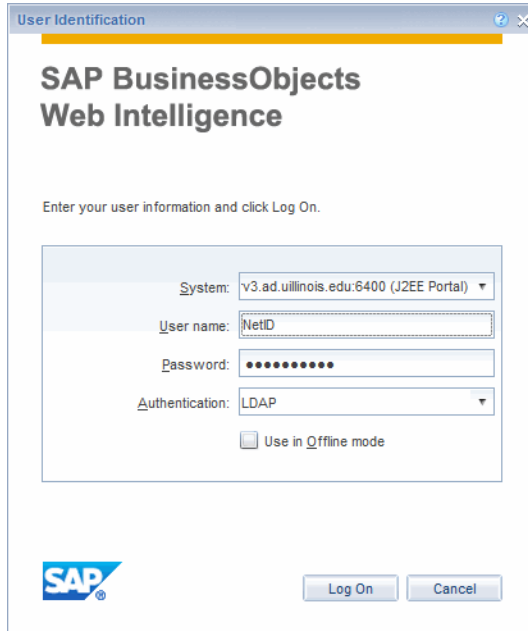

- a. Close the document.
- b. Launch the **SAP Web Intelligence** program.
- c. Click the **Web Intelligence** menu.

- a.
- d. Select **Login as**

- e. Enter your credentials:

User Name: Enter your NetID
Password: Enter your NetID Password
Authentication: LDAP

- f. Re-open the document.

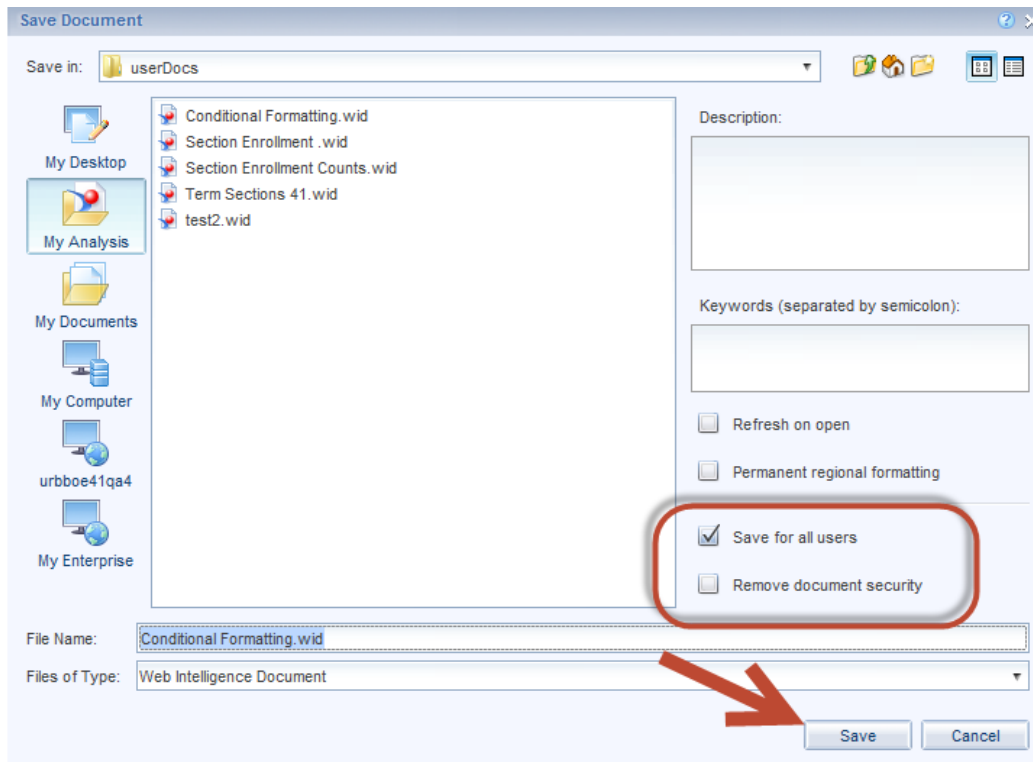

3. Changing the Document Security Setting

If you reinstate the Document Security setting, you will be prompted to enter your Business Objects credentials when opening the document. Note that if you were not the author of the document, unchecking the Remove Document Security may cause you to not be able to refresh or edit the document. If you are the author, you can change the security setting:

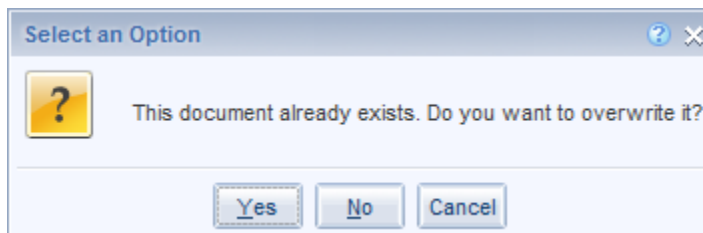

- a. Open the document
- b. On the **File** tab, Click the  **Save** drop-down menu
- c. Click **Save as**

- d. Remove the check for **Remove Document Security**
- e. Click **Save**

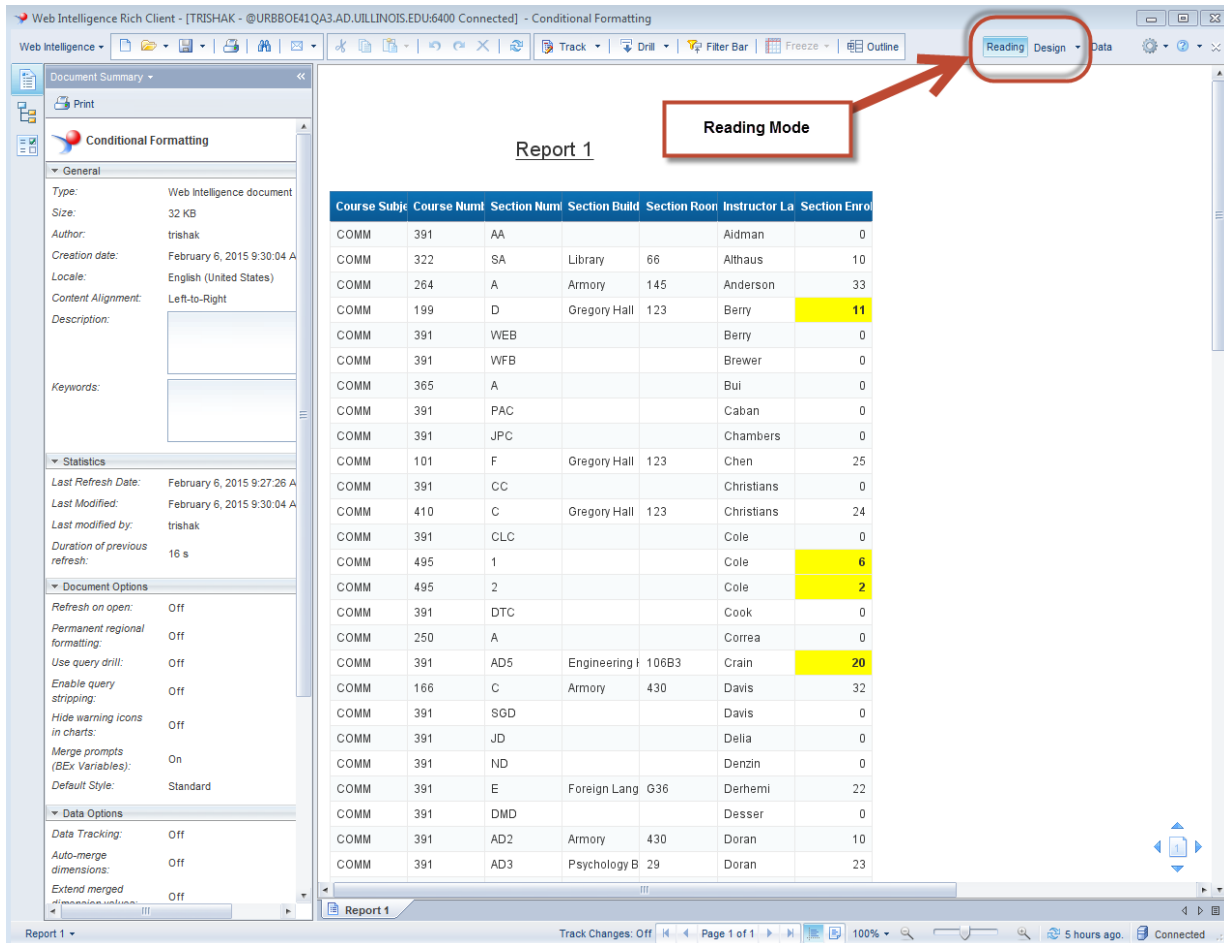

- f. Pop-up asks if you want to overwrite the file, click **Yes**

Note: If you are not the original creator of the document, unchecking the Remove Document Security box might cause issue with being able to refresh and edit the report. If this happens, recheck the Remove Document Security, and log completely into Web Intelligence before running the report.

Document Opens in Reading Mode. Cannot Edit/Refresh. Toolbars missing

If you open a Web Intelligence document and it looks like the example below, you are in Reading Mode. Web Intelligence 4.1 has two view modes: Reading and Design. Reading mode is a read-only mode used to view data, but does not allow access to make changes.

Solution:

1. Click the **Design** button.
