**AITS Decision Support  
Data Warehouse Access Plan**

The following document describes the security access roles available to users. Each page of the document describes a unique Job Category and each of the Data Subject Areas that can be requested within that Job Category. These two pieces of information – Job Category and Data Subject Area – will be used by the Unit Security Contact (USC) to request access in the DS USC Application.

Some of the Job Categories were created for a specific unit, to deliver specific data relevant to its work, and as such, the user will need to be employed by that unit to receive access. The first column – Organizational Category – will let you know which users are able to receive access. Functional Office, for example, would require a user to be employed by that functional office to receive access (Technology Services, OAR, Campus HR, etc.). Also, depending on the USC's unit, some of the Job Categories in this document may not be available/visible to them in the DS USC Application.

<b>Column</b>	<b>Description</b>
Organizational Category	Lists which unit, if any, the user must be affiliated with to receive access
Job Category	<b>Matches the DS Job Category list in the DS USC Application</b>
Description	Describes the employees who would require access
Data Subject Area	Subject area of data being requested; <b>matches the Data Subject Area list in the DS USC Application</b>
Data Group	More granular group of data within each Data Subject Area
Types of Records	Types of information contained in the Data Subject Area and/or Data Group, including any excluded data
Data Restrictions	Levels of restriction available (Campus or Campus/College or Campus/College/Dept)
Oracle Roles	Name of the Oracle role corresponding to the Data Subject Area and/or Data Group; used for ODBC connections
BI Access Roles	Name of the BI Access role corresponding to the Data Subject Area and/or Data Group; used for EDDIE
BI Products	Names of the universes that can be accessed with the Data Subject Area and/or Data Group in EDDIE

**Example of how to use the Data Warehouse Access Plan:**

I'm a USC for an academic college on the UIUC campus, and I've got a new employee starting this week who will be working in the college's business office. I need to request access to the Data Warehouse for them so they can perform their job duties related to reporting. I would start by scrolling through this document to find a Job Category that fits the employee's main job function. Since this employee will be working in the business office, the Finance Manager category would work, as would any of the more general categories (Data Analyst, for example). Then I would go through each Data Subject Area, looking at the types of records and restrictions, noting each subject area the employee will need access to. Then, login to the DS USC Application, and use the Job Category and Data Subject Area(s) noted to complete the request for access.

Organizational Category	Job Category	Description	Data Subject Area	Data Group	Types of Records	Data Restrictions	Oracle Roles	BI Access Roles	BI Products	
Functional Office	Campus HR Staff	Staff member of central office with central create/read/update/delete responsibilities for HR data at a campus level	Finance access is not available to Campus HR Staff	not applicable			none granted	none granted		
				HR/Pay	HR Employee	All employees (including student employees) Includes SSN, Birth Date and Age Excludes Medical Condition, Veteran, Vietnam service, Payroll net pay amount and Disability information	HR/Payroll data is restricted by Campus OR Campus/College OR Campus/College/Dept	HR_HR_USER	HR_HR_USER Power Users	EDW - HR Employee Administration (HR-EMP)
