

Excel, Text and Comma Separated Values (CSV) files as a data source in HTML Web Intelligence

The HTML version of Web Intelligence can now use Excel, Text and CSV files as a data source in addition to a Universe. The example below shows how to upload an Excel file to the EDDIE environment, so you can use it as a source. The same method works for Text and CSV files

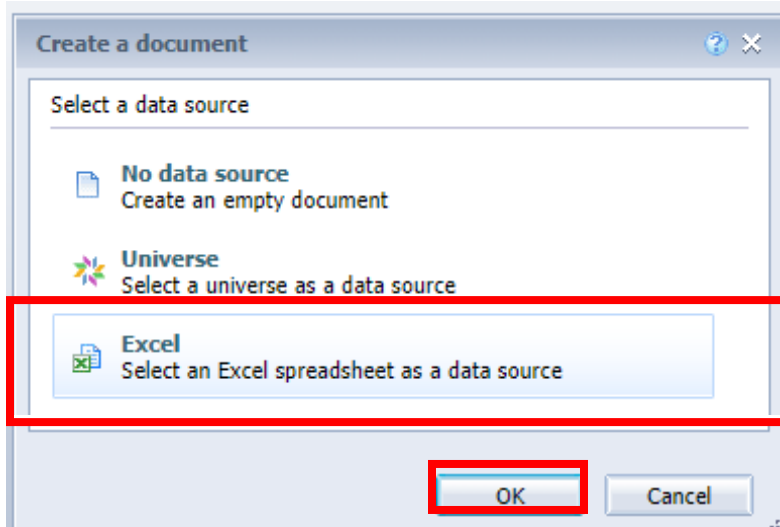

1. Upload your Excel, Text or CSV file
 - a. Click New
 - b. Click Local Document

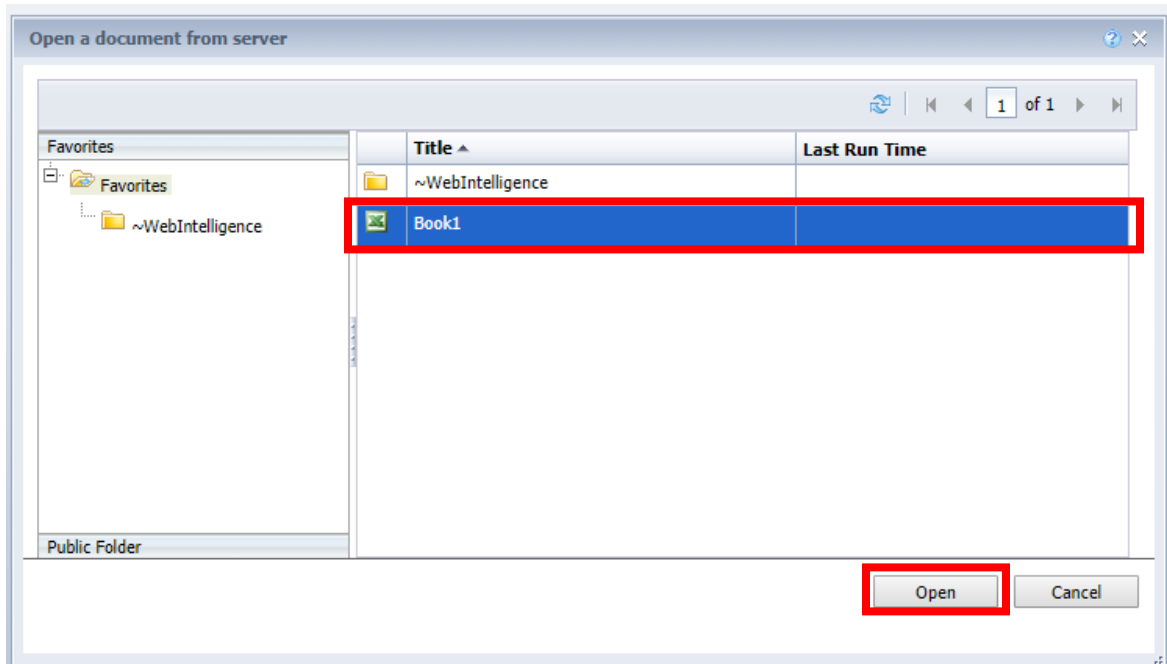

- c. Choose File
 - d. Click Add

2. Add an Excel spreadsheets as a data source in Web Intelligence
 - a. Click Create a Document
 - b. Select an Excel spreadsheet as a data source
 - c. Click OK

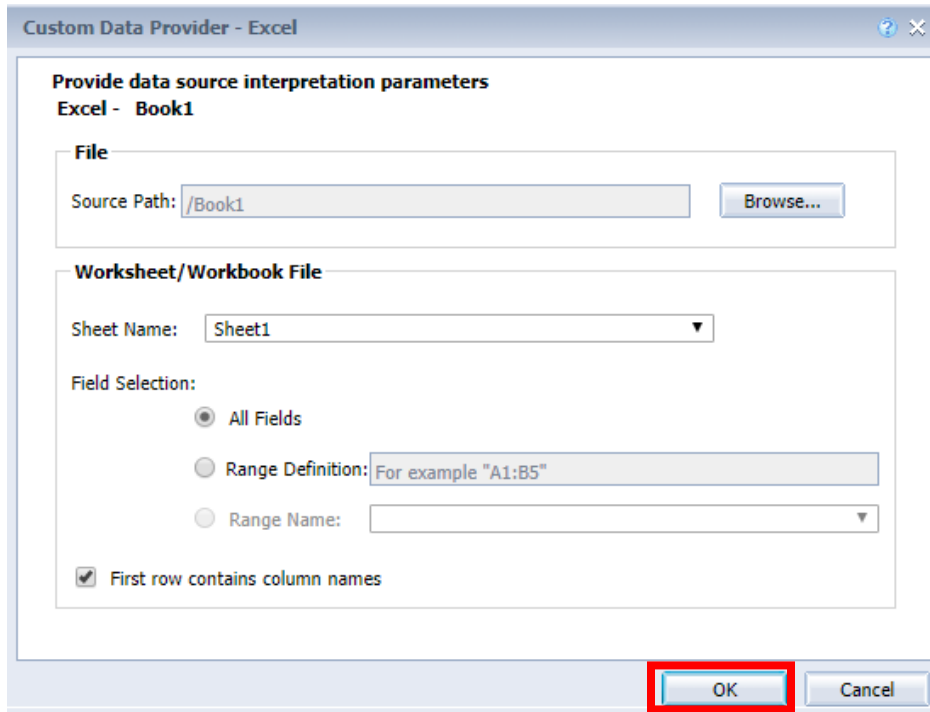

- d. Open a document from server
- e. Click Open

For Text and CSV files select them instead of the Excel file and browse to where you uploaded the file.

- f. Provide data source interpretation parameters
- g. Click OK

- h. Select Object Properties, Query Properties, Query Definition, and Result Objects
